

Question II (60%)

Write the total correctness proof tree of the triple $[P] S_1 \parallel S_2 [Q]$ (specified below) where each branch is shown up to the first order formulas. Proving first order formulas is not required.

$$\begin{aligned}
 P &\equiv [x = 5 \wedge y = 7 \wedge v = 0] \\
 S_1: P_1 &\equiv [x = 5 \wedge y = 7] \\
 &\quad * \{x+y < 3x\} [3x-y] \quad (y < 15 \rightarrow y := x + y); \quad [y = 12] \\
 &\quad \langle E! y - 2 \rangle; x := y - 1; [y=12 \wedge x=11] \langle C? y \rangle; z := x + y \\
 Q_1 &\equiv [z - y = 11] \\
 \parallel \\
 S_2: &[u < 2 \wedge v = 0, u = 0] \\
 &\quad \langle v < 1 \rightarrow u := v \rangle; [u = 0 \wedge v < 12] \langle E? v \rangle; v := v - 3; [v = 7] \langle C! u + v \rangle \\
 &\quad [v - u > 3] \\
 Q &\equiv [z < 21 \wedge v > 5]
 \end{aligned}$$

Solution

Step 1: Introduce meta-symbols to denote program constructs and annotations. It makes the proof more compact and better readable.

$P \equiv x = 5 \wedge y = 7 \wedge v =$	// global precondition
$Q \equiv z < 21 \wedge v > 5$	// global post-condition

Process S_1 :

$S_{11}: y < 15 \rightarrow y := x + y$	// iterated guarded command
$S_{12}: \langle E! y - 2 \rangle$	
$S_{13}: x := y - 1$	
$S_{14}: \langle C? y \rangle$	
$S_{15}: z := x + y$	
$P_1 \equiv x = 5 \wedge y = 7$	// local precondition of process S_1
$Q_1 \equiv z - y = 11$	// local post-condition of process S_1
$Inv \equiv x + y < 3x$	// invariant of S_{11}
$V \equiv 3x - y$	// variant of S_{11}
$P_{11} \equiv y = 12$	// intermediate condition between S_{11} and S_{12}
$P_{12} \equiv y = 12 \wedge x = 11$	// intermediate condition between S_{13} and S_{14}

Process S_2 :

$S_{21}: \langle v < 1 \rightarrow u := v \rangle$	// guarded command
$S_{22}: \langle E? v \rangle$	
$S_{23}: v := v - 3$	
$S_{24}: \langle C! u + v \rangle$	
$P_2 \equiv u < 2 \wedge v = 0, u = 0$	// local precondition of process S_2
$Q_2 \equiv v - u > 3$	// local post-condition of process S_2
$P_{21} \equiv u = 0 \wedge v < 12$	// intermediate condition between S_{21} and S_{22}
$P_{22} \equiv v = 7$	// intermediate condition between S_{23} and S_{24}

Step 2: Write the proof tree using meta-symbols as long as they need to be substituted with explicit formulae and program constructs

4.	5.	FOL^1 proof	FOL^1 proof	1.
		2.	3.	
$A_1 \vdash [P_1] S_1 [Q_1]$	$A_2 \vdash [P_2] S_2 [Q_2]$	$\vdash P \Rightarrow P_1 \wedge P_2$	$\vdash Q_1 \wedge Q_2 \Rightarrow Q$	$Coop(A_1 A_2)$
$\vdash [P] S_1 \parallel S_2 [Q]$				

Branch 1: Cooperation test

Channel E :

FOL^1 proof	
$\vdash (y = 12 \wedge u = 0 \wedge v < 12) \Rightarrow (y - 2 = 12 \wedge y - 1 = 11 \wedge v - 3 = 7)$	(Substitution in post-condition)
$\vdash (y = 12 \wedge u = 0 \wedge v < 12) \Rightarrow (y = 12 \wedge y - 1 = 11 \wedge v - 3 = 7)[y - 2/y]$	(:= - rule)
$\vdash \{y = 12 \wedge u = 0 \wedge v < 12\} \quad y = y - 2 \quad \{y = 12 \wedge y - 1 = 11 \wedge v - 3 = 7\}$	(Substitutions in post-condition)
$\vdash \{y = 12 \wedge u = 0 \wedge v < 12\} \quad y = y - 2 \quad \{(y = 12 \wedge x = 11) [y - 1/x] \wedge (v = 7) [v - 3/v]\}$	// here post-condition is constructed using assignment axiom

Channel C :

FOL^1 proof	
$\vdash (y = 12 \wedge x = 11 \wedge v = 7) \Rightarrow ((u + v = 11 \wedge v - u > 3))$	(Substitutions in post-condition)
$\vdash \{y = 12 \wedge x = 11 \wedge v = 7\} \Rightarrow (((x + y) - y = 11) \wedge v - u > 3)[u + v / y]$	(:= - rule)
$\vdash \{y = 12 \wedge x = 11 \wedge v = 7\} \quad y := u + v \quad \{((x + y) - y = 11) \wedge v - u > 3\}$	(Substitutions in post-condition)
$\vdash \{y = 12 \wedge x = 11 \wedge v = 7\} \quad y := u + v \quad \{(x + y) - y = 11 \wedge v - u > 3\}$	(Substitutions in post-condition)
$\vdash \{y = 12 \wedge x = 11 \wedge v = 7\} \quad y := u + v \quad \{(z - y = 11) [x + y / z] \wedge v - u > 3\}$	

If the cooperation tests pass we can formulate the communication commands with their local pre- and post-conditions as axioms and do not prove them again in the proofs of local processes S_1 and S_2

For process S_1 : we get axioms A_{11} and A_{12}

$$A_{11}: [y = 12] \langle E! y - 2 \rangle ; x := y - 1 ; [y = 12 \wedge x = 11]$$

$$A_{12}: [y = 12 \wedge x = 11] \langle C? y \rangle ; z := x + y \quad [z - y = 11]$$

For process S_2 : we get axioms A_{21} and A_{22}

$$A_{21}: [u = 0 \wedge v < 12] \langle E? v \rangle ; v := v - 3 ; [v = 7]$$

$$A_{22}: [v = 7] \langle C! u + v \rangle [v - u > 3]$$

Thus, $A_1 = \{A_{11}, A_{12}\}$ and $A_2 = \{A_{21}, A_{22}\}$

Branch 4: Local proof of process S_1

$$\begin{array}{c}
 \frac{4.1}{A_1 \vdash [P_1] S_{11} [P_{11}]} \quad \frac{}{A_1 \vdash A_{11}} \quad \frac{}{A_1 \vdash A_{12}} \\
 \hline
 A_1 \vdash [P_1] S_{11} [P_{11}] \quad A_1 \vdash [P_{11}] S_{12}; S_{13} [P_{12}] \quad A_1 \vdash [P_{12}] S_{14}; S_{15} [Q_1] \\
 \hline
 A_1 \vdash [P_1] S_{11}; S_{12}; S_{13}; S_{14}; S_{15} [Q_1] \\
 \hline
 A_1 \vdash [P_1] S_1 [Q_1]
 \end{array}$$

Branch 4.1:

$$\begin{array}{c}
 FOL^1 \text{ proof} \quad FOL^1 \text{ proof} \quad FOL^1 \text{ proof} \quad FOL^1 \text{ proof} \\
 \hline
 \frac{}{A_1 \vdash P_1 \Rightarrow Inv} \quad \frac{}{A_1 \vdash Inv \wedge y < 15 \Rightarrow V \geq 0} \quad \frac{}{A_1 \vdash (Inv \wedge V = n \wedge y < 15) \Rightarrow (Inv \wedge V < n)[(x+y)/y]} \quad \frac{}{A_1 \vdash Inv \wedge V \geq n \Rightarrow P_{11}} \\
 \hline
 A_1 \vdash [P_1] * \{Inv\} [V] (y < 15 \rightarrow y := x + y); [P_{11}] \quad A_1 \vdash [P_1] S_{11} [P_{11}]
 \end{array}$$

(Iterated guarded command)

Iterated guarded command rule for total correctness

$$\frac{\vdash P \Rightarrow I \quad \vdash I \wedge \bigwedge_{i=1}^n b_i \Rightarrow V \geq 0 \quad \vdash \forall i=1,n : [I \wedge V = n \wedge b_i] S_i [I \wedge V < n] \quad \vdash (I \wedge_{i=1,n} \neg b_i) \Rightarrow Q}{\vdash \{P\} * \{I\} [V] [\Box^n_{i=1} b_i \rightarrow S_i] \{Q\}}$$

I – invariant, V - variant

Branch 5: Local proof of process S_2

$$\begin{array}{c}
 5.1 \quad \frac{}{A_2 \vdash [P_2] S_{21} [P_{21}]} \quad \frac{}{A_2 \vdash A_{21}} \quad \frac{}{A_2 \vdash A_{22}} \\
 \hline
 A_2 \vdash [P_2] S_{21} [P_{21}] \quad A_2 \vdash [P_{21}] S_{22}; S_{23} [P_{22}] \quad A_2 \vdash [P_{22}] S_{24} [Q_2] \\
 \hline
 A_2 \vdash [P_2] S_{21}; S_{22}; S_{23}; S_{24} [Q_2] \\
 \hline
 A_2 \vdash [P_2] S_2 [Q_2]
 \end{array}$$

Branch 5.1:

$$\begin{array}{c}
 FOL^1 \text{ proof} \\
 \hline
 \frac{A_2 \vdash (u < 2 \wedge v = 0, u = 0 \wedge v < 1) \Rightarrow (u = 0 \wedge v < 12)[v/u]}{A_2 \vdash [u < 2 \wedge v = 0, u = 0 \wedge v < 1] u := v [u = 0 \wedge v < 12]} \\
 \frac{A_2 \vdash [u < 2 \wedge v = 0, u = 0] \langle v < 1 \rightarrow u := v \rangle; [u = 0 \wedge v < 12]}{A_2 \vdash [P_2] S_{21} [P_{21}]}
 \end{array}$$

5.1

(guarded command)
